Profile

M.Sc. Computer Science student at TU Berlin and CKA/CKS-certified cloud engineer focused on Linux infrastructure, container orchestration, production automation and agent-facing backend tools. Hands-on experience with Go services, Docker, Kubernetes, AWS/GCP deployment assets, RAG workflows, fine-tuning data pipelines and cloud operations.

Cloud / DevOps Skills

- **Cloud Platforms:** AWS EC2/RDS, Google Cloud Platform, Cloudflare R2
- **Containers / IaC:** Docker, Docker Compose, Kubernetes, Ansible, Terraform, Caddy
- **Backend / Data:** Go/Gin, GraphQL, MCP, PostgreSQL/PostGIS, Redis, JWT/RBAC, OAuth, REST APIs
- **AI / Agents:** RAG, fine-tuning data preparation, embeddings, hybrid retrieval, ReAct, NetworkX
- **Programming:** Go, Python, TypeScript; basic Java

Certifications

- **CKA:** Certified Kubernetes Administrator The Linux Foundation
- **CKS:** Certified Kubernetes Security Specialist The Linux Foundation

Work Experience

- **03.2024 - 06.2024:** AI Engineer Intern, Part-time JH UniScheduler / Jhinno
 - Worked on Jiaozi/Dumpling-related RAG and fine-tuning workflows, turning user model requirements and dataset metadata into structured retrieval and generation tasks.
 - Built Python-based retrieval components with embeddings, graph knowledge-base metadata, hybrid scoring and prompt templates to support model selection and code generation.
 - Prepared fine-tuning and evaluation datasets from generated training-code traces, failure cases and self-correction logs; supported iterative experiments for a multi-agent AutoDL pipeline.

Projects

- **03.2026 - Present:** WeJoin - Cloud-Native Campus Platform wejoin.store
 - Built a modular campus platform for map-based events, course reviews and moderation with a Go/Gin API and React/TypeScript frontend.
 - Containerized with Docker Compose and Caddy; integrated PostgreSQL/PostGIS, Redis, Cloudflare R2, tracked migrations, health checks and recovery runbooks.
- **06.2026 - Present:** MiSArch Agent Gateway - MCP for Microservices Go, MCP, GCP
 - Built a Go MCP gateway over MiSArch GraphQL to expose catalog lookup and pending-order workflows as agent-facing tools with typed input schemas.
 - Implemented UUID validation, health/readiness endpoints, runtime/source metadata and explicit side-effect boundaries for safe agent operations.
 - Deployed the MiSArch stack and gateway on GCP Compute Engine with Docker Compose; compared raw GraphQL and MCP paths in repeatable agent smoke tests.
- **Dumpling, an End-to-End AutoDL agent**
 - Organized and led a 6-person team as initiator and architect to build an agent-based automated deep learning platform.
 - Designed a graph-based model knowledge base with 14 backbones and 22 checkpoints, typed edge semantics and hybrid retrieval scoring.
 - Designed a ReAct-based self-correction mechanism for multi-agent autonomous error correction and ablation experiments on generated code.

Education

- **10.2025 - 07.2027:** Computer Science, M.Sc. Technical University Berlin
Focus: Cloud Infrastructure, Kubernetes, Docker, Ansible, AI Agent
- **09.2021 - 06.2025:** Computer Software Engineering, Bachelor Xidian University
Focus: Computer Science, Software Engineering, Go Development
